

W2D2 Memo #1

17 October 2018

Hello all,

I am sending this first World Wide Data Day (W2D2) Memo of 2018 to those who were involved last year, those who are registered this year, and some who I think will be interested. These memos, describing some of the things you need to know to get ready, will come to you every Wednesday until "the big day" on Thursday 15 November. (I am writing on Wednesday evening in the U.S., so some of you are getting this on your Thursday. I will try to be earlier next week!)

Here is the news:

- **Time to register!** If you have not yet registered, please go to the registration page at <https://quarknet.org/content/register-2018-w2d2>. Registrations close at 12:00 UTC on Tuesday 30 October.
- **New cool event displays!** Both the ATLAS and CMS event displays for W2D2-18 show x- and y-axes. CMS has the z-axis as well. This should make it easier for students to measure angles.
- **Website is up!** Go to <https://quarknet.org/content/lhc-world-wide-data-day-2018> (long url) or <http://tiny.cc/w2d2-18> (short url). The instructional screencasts, in the ATLAS and CMS pages of the site, will be updated soon, hopefully by the next Memo. For now, we still have the old screencasts, which are still useful.
- **Tweet it!** We are again on social media, especially Twitter. Use #LHCIMC19 and #W2D2\_18.
- **Moderators needed!** Particle physicists interested in moderating please register at <https://goo.gl/forms/qmZMrj2QIHlzsqij2>.
- **Want to hear from you!** Your questions drive much of the content of the memos, so please send them to this e-mail address.

Enjoy the rest of the week! More next Wednesday! This and all W2D2 memos will be posted on the website.

All the best,

Ken
