

## Backup Documentation, QuarkNet Teachers' Workshop (July 7-8, 2022)

QuarkNet is a nonprofit collaboration dedicated to developing America's technological workforce. It is an NSF-funded partnership between Fermilab at the University of Notre Dame, with the primary goal of providing science teachers the means to develop their skills and bring real research experience into the high school science classroom.

QuarkNet works in partnership with many centers throughout the United States. A new center was just established at UC Irvine in 2022. As our first event, we held on July 7-8, 2022 a workshop for local high school teachers. In this workshop teachers met faculty and research staff, heard presentations about the cutting-edge in our field, toured our laboratory facilities, and carried out a series of hands-on activities designed to expose them to particle physics research. The agenda of the two-day event can be found online in the following address:

<https://quarknet.org/content/uc-irvine-quarknet-summer-workshop-2022>

As can be seen in the flyer we used to advertise the event (below), participating teachers were promised a \$100 stipend for every day they participated, which is common practice for all QuarkNet-related workshops. In fact, the funding for these stipends comes directly from QuarkNet. It is essential for us to build a solid relationship with these teachers, since the idea is to invite them with their students in the coming years.

**University of California**  
Irvine, CA, USA

**Particle Physics Workshop for High-School Teachers**  
July 7-8, 2022

**Free event!**  
**Register online!**

Will have support for participating teachers, including \$100 /day stipend

Learn about particle physics research and get your students interested in it!
